DETAILED ACTION

1. Applicant's amendment and accompanying remarks filed May 5, 2005 have been acknowledged.
2. The rejection of claims 10 under 35 U.S.C. 112, second paragraph is withdrawn due to applicant's amended claim 10.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.

4. Claim 10 recites the limitation "transparent solution or dispersion" in lines 1 and 2.

There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 8 and 10-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Van Haare et al., U.S. Patent Number 5,994,496.

Art Unit: 1774

Van Haare discloses layers of conjugated polymers that may be used as a transparent coating on a display device or as an electrode layer in an electroluminescent device (see column 1, lines 5-12). The reference discloses 3,4-di(2-methylbutoxy)-2,5-thiophene as a preferred polymer (see column 3, lines 22-31). Column 5, lines 27-37 of the Van Haare reference discloses that at least one electrode (which can include both electrodes) has a transparent coating using a preferred polythiophene such 3,4-di(2-methylbutoxy)-2,5-thiophene solution.

Double Patenting

7. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Art Unit: 1774

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

8. Claims 8-15 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 6, 10 and 13 of copending Application No. 10/105,758. Although the conflicting claims are not identical, they are not patentably distinct from each other because both applications recite a coating process for preparing a conductive layer comprising applying an aqueous composition or paste, containing a polymer or copolymer of a 3,4 dialkoxythiophene in which the two alkoxy groups may be the same or different or together represent an optionally substituted oxy-alkylene-oxy bridge, to an optionally subbed support, a dielectric layer, a phosphor layer or an optionally transparent conductive coating (electrode). The co-pending application does not specifically recite an electroluminescent device. However, the layered structure (support; dielectric layer; phosphor layer and conductive coating) is used in an electroluminescent device. Therefore, it would have been obvious to one of ordinary skill in the art to recognize that the coating process for preparing a conductive layer of the co-pending application can be used for an electroluminescent device.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Art Unit: 1774

Response to Arguments

9. Applicant's arguments with respect to claims 8-15 have been considered but are moot in view of the new ground(s) of rejection.
